DIGITAL LITERACY PROJECT REPORT

Name : Anshika Maheshwari

Registration Number : 25BCE10595

Branch : B.Tech CSE Core

Course Code : CSE0001

❖ INTRODUCTION

This project was completed as part of the Digital Literacy course. The aim of this project is to understand the importance of digital tools, online safety, and professional communication. It helps students build a strong digital presence and use technology effectively.

❖ TASK 1: INFOGRAPHIC

For Task 1, I created a digital literacy infographic using Canva. **Canva** is an easy-to-use online design tool that provides various templates and elements to create visually appealing content. In my infographic, I included three important aspects of digital literacy: what digital literacy means, safe internet practices, and email etiquette.

The design explains digital literacy as the ability to use digital tools effectively and responsibly. It also highlights important safety measures such as using strong passwords, avoiding suspicious links, and protecting personal information. Additionally, it includes basic email etiquette rules like using proper greetings, writing clear messages, and maintaining a polite tone.

While creating this infographic, I found it interesting to use different icons and colors to make the content more engaging and easy to understand. However, arranging the content neatly in a single page was slightly challenging. Overall, this task helped me understand the importance of presenting information in a simple and visual way.

❖ TASK 2: DIGITAL PORTFOLIO

For Task 2, I created my digital portfolio by setting up profiles on **GitHub, LinkedIn, and HackerRank**. These platforms are widely used by students and professionals for learning, networking, and showcasing skills.

GitHub is used to store and share projects, making it useful for building a coding portfolio.

LinkedIn is a professional networking platform where students can connect with others, explore career opportunities, and showcase their academic background.

HackerRank is a coding practice platform that helps improve programming skills through problem-solving.

Over the next four years, I plan to use GitHub to upload my projects, LinkedIn to build a professional network, and HackerRank to practice coding regularly. These platforms will help me improve my technical skills and prepare for internships and placements.

❖ TASK 3: PLATFORMS

For Task 3, I explored coding and collaboration platforms. I used **HackerRank** as my coding practice platform, where I solved a beginner-level problem called "**Solve Me First**." This helped me understand basic problem-solving and how to write simple code.

For collaboration, I used **Google Forms** to create a Digital Literacy Awareness Quiz. The form included five questions related to digital literacy, online safety, and professional platforms. I also viewed the responses section, which is useful for collecting and analyzing data.

These tools are very helpful for students. HackerRank helps improve coding skills through practice, while Google Forms is useful for surveys, quizzes, and data collection. I plan to use these platforms regularly for academic learning and improving my technical skills.

❖ TASK 4: EMAIL ETIQUETTE

In Task 4, I learned about **professional communication and email etiquette**. I wrote two formal emails: one requesting an assignment extension and another applying for a summer internship. These emails helped me understand how to write clear subject lines, use polite language, and maintain a proper structure.

I also created a **social media do's and don'ts checklist**, which highlights responsible online behaviour. Poor digital communication can cause misunderstandings and create a negative impression. For example, sending an email without a proper subject or using informal language can be seen as unprofessional.

This task helped me realize the importance of clear and respectful communication in both academic and professional environments.

❖ TASK 5: CYBERCRIME AWARENESS

In Task 5, I learned about **cybercrime** and how it affects people in daily life. I chose **UPI / Online payment fraud** as my case study because it is very common and relevant to students. While researching, I was surprised to see how easily people can be tricked into sharing sensitive information.

I realized that a small mistake, such as sharing an OTP or clicking on a suspicious link, can lead to serious financial loss. This task made me more aware of online threats and the importance of being cautious while using digital platforms.

As a result, I will make sure to never share my personal or banking details with anyone and always verify sources before making any online transactions.

CONCLUSION :-

This project helped me develop essential digital skills such as creating online profiles, understanding cyber safety, and communicating professionally. It also improved my confidence in using digital tools and platforms effectively.
